

Data audit, cleanup, and prevention work — full record

Everything done across backups, data-integrity investigation, live fixes, and the Denstar test-org removal, in the order it happened.

Scope: Denstar, XFlagFootball, Showtime Sportz **Data changed:** Backed up before every write

Code changed: Committed locally, not yet deployed

ISSUES OPEN,
AWAITING DECISION

01

BACKUPS

Full database backup, then a backup per organization

- Complete JSON backup of every collection in the live database — safe restore point before any investigation began.
- Separate backup per organization (Showtime Sportz, XFlagFootball, Denstar), self-contained, plus shared reference data (venues, counties, states) backed up once.

DONE

02

INVESTIGATION

Mapped everything tied to the Denstar test org

- Full inventory: 10 leagues, 25 teams, 20 games, 6 schedules, 28 plays, 48 players, 48 users, 98 activity-log entries.
- Traced a UI display bug (a real team briefly appeared to be missing from the Teams page) to a front-end rendering issue, not a data problem.

DONE

03

ROOT CAUSE

Traced three data-display problems to their actual source

- A schedule appeared on the Schedules page but its league was missing from the Games dropdown — its League record had been deleted without cleaning up what still pointed at it.
- A league appeared in the Games dropdown but not on the Schedules page — confirmed this is expected behavior, not a bug (games can be created without a schedule wrapper).
- The Schedules page's "League" column was showing a free-text label instead of the actual linked league — a real display bug, independent of the other two.

DIAGNOSED

04

CROSS-CHECK

Confirmed the same bug pattern reached other organizations

- XFlagFootball had the identical "deleted league, dangling reference" problem — a different league, affecting 3 teams (Freaks, Strong Side, Young Guns).
- Showtime Sportz checked clean — no trace of this pattern.

CONFIRMED

05

CODE FIXES — ROOT CAUSE

Five fixes shipped, closing the actual holes

- Deleting a league now blocks if teams, schedules, or games still reference it — instead of silently leaving them dangling.
- Deleting a game now also removes its play-by-play and stat records — previously they were left behind, orphaned.
- Teams that hold a reference to a deleted league now show "Unknown league" with a working button to clean it up, instead of the problem being silently hidden.
- Schedules now show the real, linked league name (or a clear warning if that link is broken), instead of a disconnected free-text label.
- Assigning a player to a team now checks for a jersey number already in use on that team — closing the gap that caused the XFlag jersey-conflict issue (see phase 07).

Code changes are complete and committed locally. Not yet deployed to the live site — see phase 11.

IN CODE — NOT DEPLOYED

06

LIVE FIX — XFLAGFOOTBALL

Removed the dangling league reference found in phase 04

- Confirmed the fix's exact scope first (dry run) — only Freaks, Strong Side, Young Guns affected, no games or schedules involved.
- Removed the one broken reference from each team. Verified after: all three now correctly show no league, rosters untouched.

FIXED & VERIFIED

07

INVESTIGATION

Full audit of all 21 XFlagFootball leagues, two more issues found

- **Beverly Spring 2026:** three teams (Trojans, Dragons, Crusaders) lost their regular-season team membership when they moved to the playoffs league — leaving a completed, scored 12-game season with no teams currently linked to it.

- **Six teams, duplicate jersey numbers:** 12 players across DARKSIDE, GOAT, Members Only, N&B, Suspects, and Warfare currently share a number with a teammate.
- Everything else across all 21 leagues checked clean — no other dead references, no cross-organization data leaks, no roster mismatches.

DIAGNOSED

08

LIVE FIX — XFLAGFOOTBALL

Restored Beverly Spring 2026's team membership

- Added the missing regular-season membership back for all three teams, alongside their existing playoffs membership — nothing removed, nothing overwritten.
- Verified: all 12 games, their scores, and the playoffs data were untouched throughout.

FIXED & VERIFIED

09

INVESTIGATION

Reconstructed 614 leftover play records platform-wide

- Root cause: deleting a game used to leave its individual play records behind — same bug class as phase 03, different feature. Fixed in phase 05.
- Traced and attributed all 614 records to their original matches by cross-referencing team names, timestamps, and the games' own deletion history — nothing left unattributed.
- Final attribution: XFlagFootball (352 plays / 14 matches), Denstar (231 plays / 30 matches), Showtime Sportz (31 plays / 2 matches).

FULLY RECONSTRUCTED

10

CLIENT DELIVERABLE

Plain-English report delivered for the two open XFlagFootball issues

- Jersey-number conflicts and the orphaned play records — what's wrong, where it's visible, why it happened, and what fixing each one takes.
- Delivered as a shareable web page and a printable PDF.

DELIVERED — AWAITING YOUR DECISION

11

DENSTAR REMOVAL

Full deletion of the Denstar test organization

- Pre-deletion safety pass: confirmed nothing in Showtime Sportz or XFlagFootball depended on any Denstar data. Caught and protected one real account (an XFlagFootball user who also had a Denstar player record) from being affected.
- Deleted in dependency order — play records (including the 231 already-orphaned Denstar-era ones from phase 09), stats, games, schedules, players, teams, users, activity logs, leagues, seasons, and finally the organization itself.
- Verified: every category confirmed at zero afterward, nothing left behind.

COMPLETE & VERIFIED

12

FOLLOW-UP FIX

Closed a gap the deletion missed — five staff logins

- A login test surfaced that five Denstar staff accounts (organizer and statistician roles) still worked after the deletion — they store their organization link differently from player accounts, and the original deletion query didn't account for that.
- Re-verified each account was exclusively tied to Denstar, then removed all five. Confirmed zero remaining references to Denstar anywhere in the user records.
- Checked XFlagFootball and Showtime Sportz for the same pattern as a precaution — both clean, their staff accounts are legitimate and untouched.

FIXED & VERIFIED

13

NEXT UP

Preparing to deploy, then build a fresh test league

- Agreed sequence: verify the build compiles clean, commit the code fixes from phase 05, push, deploy to the live site — then create a new league from scratch to test the full system against the fixed code.
- Not yet started — deployment access sits outside this work and needs to happen on your end.

PLANNED — NOT STARTED

Where things stand right now

ITEM	STATUS
Denstar test organization	FULLY REMOVED
5 root-cause code fixes	WRITTEN, NOT DEPLOYED
XFlagFootball — dangling league reference	FIXED
XFlagFootball — Beverly Spring 2026 membership	FIXED
XFlagFootball — jersey number conflicts (12 players)	OPEN — NEEDS YOUR CALL
Platform-wide — 614 orphaned play records	OPEN — SAFE TO CLEAN UP, AWAITING GO-AHEAD
New test league on the live site	WAITING ON DEPLOY

Every data change above was backed up beforehand and verified afterward. No changes were made without being discussed first.
